**FLORIDA INSTITUTE FOR ADVANCED DIAGNOSTIC IMAGING'S
EXECUTIVE PHYSICIAN STEVEN M. STROBBE NAMED TO
MEDICAL IMAGING INDUSTRY TOP 10 LIST**

Cited for Unique Cardiovascular Imaging Techniques and Research

PORT RICHEY, Fla., January 24, 2006 – The Florida Institute for Advanced Diagnostic Imaging (FIFADI) announced that executive physician and CEO Steven M. Strobbe, DO was named in *Medical Imaging's* "Industry Top 10" which appeared in this month's cover story. Recognizing the best of the best in the field of radiology, the first-annual competition held online voting with its 26,000 readers in 10 categories and ranked Strobbe as one of the medical industry's top cardiovascular imagers based on techniques and research, patient care and outcomes, and industry interaction.

"I am pleased to be involved with the development and implementation of non-invasive CT Coronary Angiography technology that will eventually replace several invasive and non-invasive diagnostic cardiac procedures," said Strobbe. "We have a talented core of people in our country who are making a profound impact on the speed at which medical imaging science is progressing."

With more than 28 years as a practicing physician and founder/operator of several medical facilities, Strobbe's latest endeavor is the Florida Institute for Advanced Diagnostic Imaging which fields research in CT Coronary Angiography and the development of cardiac MR and its practical applications with state-of-the-art diagnostic equipment. The Institute, under his direction, has acquired a deep understanding of the diagnostic future and application of imaging science and technology in cardiovascular

disease therapies and will continue to refine procedures and protocols in CTA case preparation and management to enable physicians to evaluate and diagnose cardiac cases within 15 minutes. Strobbe attended Kirksville College of Osteopathic Medicine (Kirksville, Mo.) and completed his training at Suncoast Hospital (Largo, Fla.) For more information about FIFADI, visit www.diag1.com.
